Big Data Infrastructure: Streaming, management & analysis with Redshift

By: Panoply.io, ironSource and Looker

↗   🔖

FREE   REGISTER

As the volume and variety of data continues to grow more and more companies need to implement scalable big data infrastructure that transfers, manages, and analyzes their data in order to support analytics and insights. Developing, maintaining and scaling these technological terrors fall on the shoulders of developers.

Creating infrastructure that can deal with your unique needs, is user friendly, and scales with the influx of data that your company generates is a major hurdle to overcome. We will show you how to use cost-effective, and infinitely scalable data pipelines and management platforms built on top of Redshift, resulting in a simple but powerful data platform tailored to your company.

Part 1: How we stream 200B events /month in near real time into Redshift (Dor Isseroff)

Part 2: Redshift at Lightspeed: How to continuously optimize and modify Redshift schemas (Roi Avinoam)

Part 3 Model all of your data in Looker and expose it to business users for governed, secure and self-service exploration (Erin Franz)

About the Speakers:

Roi Avinoam is CTO and Co-Founder of Panoply.io. Over the past decade, Roi has acted as CTO of several companies and has built countless technical products, including many data storage and analysis platforms. https://il.linkedin.com/in/avinoamr

Dor Isseroff is Director of Business Development & Sales for the Data Solutions division of ironSource. Dor is driven by the desire to find creative, innovative and cost-effective solutions to the challenges surrounding big data today. https://il.linkedin.com/in/disseroff

Erin Franz is Senior Sales Engineer at Looker. She manages the product and technology side of Looker's alliances and helps partners build value added services and product offerings on top of Looker's platform. https://www.linkedin.com/in/erinfranz

WHEN
Tuesday, July 26, 2016 from 6:00 PM to 8:00 PM (PDT) - Add to Calendar

WHERE
AWS Pop-up Loft SF - 925 Market St, San Francisco, CA 94103 - View Map

Looker brings data analysts and business teams together by making it easy for everyone in the
enterprise to find, explore and understand the data that drives their decision-making. Looker's
in-database architecture and semantic modeling layer allows the data team to expose all of the
data (not just subsets) in a governed way to business users, who then use standardized metrics
and dimensions for ad hoc analysis and visualization.
